In our vision of future atelier we propose a solution of his structure as bridge localized on Wisła river. This bridge will connect East and West part of Poland.

From many proposed localizations we choose and discuss a Warsaw example. This location is a symbolic place. The Artelier location is between car and railway bridges. As pedestrian and bicycle friendly structure, Artelier connect sport, culture, and science parts of Warsaw. Atelier modules are covered by green roof. We propose use flat roof windows (in different sizes) in modules. Project marks artists diversity.
